

ZF-1 Triple-purpose UV Analyzer

The UV analyzer series are widely applicable in such fields as genetic engineering, molecular biology, micrology, pasturage and veterinary medicine, hygiene and disease control, drugs, food, weaving, oil, cultural relics, and public security to observe and screen the strips of DNA and RNA and test protein and nucleotide.

In the production and research of pharmaceuticals, it may be used to check hormone alkaloid and vitamin, which is critical to fluorescence drug quality, Moreover, it is adapted for the test of folium analysis and paper base analysis flecks. The instrument has a variety of portable, three-use, desktop, compact and camera products, being optimum research instrument for the scientific test.

Power:	220V
Capacity:	30W
Wavelength: 365nm(spotting)	254nm
Color filter:	200×50mm
