

HN-K1000C

Product Description:

A centrifuge is a piece of equipment, generally driven by an electric motor, that puts an object in rotation around a fixed axis, applying a force perpendicular to the axis. A centrifuge is also used to separate the components of blood in blood banks. The centrifuge works using the sedimentation principle, where the centripetal acceleration causes denser substances to separate out along the radial direction (the bottom of the tube). By the same token lighter objects will tend to move to the to top.

ABS constructor, low noise, large capacity, steady performance, widely applicable for labs, biology, chemistry, physical, hospital, food and environmental protection fields.

Specifications of HN-K1000C Benchtop Low Speed Centrifuge	
Power Supply	AC 220V/110V 50Hz/60Hz
Capacity	20ml*8
Max rcf	2325Xg
Timer	0-60min
Max speed	4000rpm
Speed indication	Pointer indication
Safety control	Auto breaking
